The Problem

Today

Complaints can arrive through verbal requests, paper notes, WhatsApp messages or informal conversations.

That makes it difficult to know which complaint is active, who is handling it, and whether it has actually been resolved.

What's the issue

- No clear record of reports
- No status of reports
- Delayed assignment
- Repeated follow-ups
- Weak accountability
- Difficult management

Campus Care gives

One platform for
Reporting
Tracking
Assigning
Updating
Notifications

Who Faces the Problem? What Happens If It Stays Unsolved?

1

Students

Report classroom, lab, washroom, electrical, water or facility issues.

2

Staff

Raise maintenance requests and need updates without repeated calls.

3

Maintenance Team

Need clear assignments, details, priority and contact information.

4

Administration

Need clear record and details of the issue and the solution.

If the problem is left unsolved

- Small issues can become larger maintenance problems.
- People lose time asking for updates.
- Managers lack reliable evidence for decisions.

Vision & Goals

Single point of reporting

One standard form captures issue details.

01

Visible status

Users can see New, Assigned, In Progress, Resolved or Closed.

02

Accountable assignment

Admin can assign or change the responsible maintenance person.

03

Faster communication

Status changes and important actions are informed to users.

04

Scope: Core First, Advanced Later

Basic Prototype

- Login and role-based access
- Student/staff complaint submission
- Complaint list and status tracking
- Admin review and assignment
- Status updates and resolution notes
- Simple notification layer
- Database-backed records

Advanced — Phase 2

- Analytics and dashboards
- Attachment and image evidence
- Multi-campus support
- Automated email/SMS integration
- Search, filters and reporting exports

Why We Chose Scrum

Small cross-functional team

4 people with different responsibilities can coordinate closely.

Requirements can change

New complaint categories, roles or workflow rules may emerge after feedback.

Urgency matters

Maintenance issues should be handled quickly, so waiting for one final release is risky.

Scrum gives us a loop

This lets management see usable progress before the whole project is finished.

Three Scrum Ideas We Apply

SPRINT

A short fixed period where the team aims to complete a usable slice of Project.

Example: Sprint 1 delivers login and complaint submission.

01

DAILY SCRUM

A short daily sync: what was done, what is next, and what is the issue.

Example: a database issue is raised early instead of waiting for the end of the sprint.

02

SPRINT REVIEW

The completed increment is shown, discussed and checked against the need.

Example: management reviews the tracking screen and suggests a better status flow.

03

Product Backlog

01	User login	Foundation for secure access and role-based screens.
02	Submit complaint	Provide category, location, description and priority.
03	Complaint tracking	Show current status and history to the reporter.
04	Maintenance assignment	Let admin assign/change a maintenance team member and contact them.
05	Notifications	Send important status changes and actions to the user.

Three Short Sprints

Each sprint ends with a usable increment and feedback point.

User Stories (1–3)

US-01

As a **student** user, I want to **submit a complaint with the issue details** so that **the college receives a clear record**

US-02

As a **student** user, I want to **check my complaint status** so that **I know whether it is being handled**

US-03

As a **staff** user, I want to **report a maintenance issue in one place** so that **I can avoid repeated calls and follow-ups**

COLOR KEY

ROLE

GOAL

BENEFIT

User Stories (4–6)

US-04

As an **administrator**, I want to **assign or change the maintenance team member** so that **the work has a clear owner**

US-05

As a **maintenance team member**, I want to **update a complaint as In Progress or Resolved** so that **the reporter knows what is happening**

US-06

As a **user**, I want to **receive a status notification** so that **I do not need to keep checking manually**

ADMIN

[Overview](#)[All Complaints](#)[Assignments](#)[Team](#)[Reports](#)

Complaint management

[EXPORT](#)

ID	ISSUE	STATUS	ASSIGNEE	PRIORITY	ACTION
A-1042	Water leakage	IN PROGRESS	Arun K.	High	Edit
A-1041	Fan not working	ASSIGNED	Meena R.	Med	Contact
A-1039	Projector issue	RESOLVED	Rahul S.	Low	View
A-1038	Broken tap	NEW	Unassigned	High	Assign

How Front End + Back End Work Together

Prototype

- Basic login and role separation
- Complaint form + database record flow
- Dashboard + status model
- Admin assignment view

Next phase

- Automated notifications
- Maintenance reminders
- Analytics and reporting
- Attachments + richer search

Testing

Login validation

Wrong credentials / missing fields

Access is blocked and message is shown.

Complaint creation

Required fields / invalid input

No incomplete complaint record is saved.

Assignment

Assign / reassign / unassign

Correct team member appears on the complaint.

Status flow

New → Assigned → In Progress → Resolved

User and admin views stay consistent.

Resolution

Resolution note + close

Completed complaint shows final outcome.

Why Campus Care Matters to the College?

LESS TIME

Fewer calls, messages and follow-ups.

LOWER PROCESS COST

Less manual tracking and paperwork.

BETTER ACCOUNTABILITY

Every active complaint has an owner.

BETTER EXPERIENCE

Users can see progress instead of guessing.

Why sprints reduce risk A long delivery can hide problems until the end. Short sprints expose workflow, UI and technical issues earlier, so the team can correct them before more work depends on them.

“We request the college to support Campus Care as a simple Digital system that makes complaints visible, accountable and easier to resolve.”

REPORT • TRACK • RESOLVE
